

Bob Eder's Notes:

Both Marine Research Areas (MRA) Suggested Parameters

- Minimum navigation requirement for both areas; GPS
- No forage fishing, no dragging, no seining, no commercial targeting of rockfish

Southern (MRA)

Commercial:

- Salmon trolling allowed with log (cpue, bycatch, etc)
- Crab fishing allowed with enhanced log (CPUE, by catch, estimate current, bait schemes...)

Recreational:

- Both charter and personal operators require MPA entry license (would include fish I.D., best release practices, reporting protocols)
- Charter and personal operators agree to full catch reporting, donation of otolith, log, possibly photo documentation
- Rock species take will be restricted as appropriate (black and blue rock, lingcod?). Possibly prohibit take of largest fish (product BOFF)
- Salmon and crab OK
- Adaptive Management

Northern MRA -includes all southern restriction plus:

Commercial:

- Salmon trolling allowed as in south, but requires VMS and agrees to take observer.
- Crab fishing allowed as in south, but require VMS, agree to take observer, and agree to deploy data collection instruments

Recreational:

- Crab and salmon take OK as in south with CPUE and bycatch reporting
- Rock fish take restricted to research – related only as per ODFW
