

2011 = Year of Upgrades

- We are scheduled to upgrade most of our backbone software components (apache, mysql, joomla, mapserver, etc.)
- Will include a small number of design / template updates
- Most major overhaul will be in the Search function – transition to a true CSW
- Another key change will be improved visibility of behind the scenes services

Summary

- Search – transition to a true CSW service (software TBD)
- Tools – improved visibility of services and one new tool (MarineMap)
- Learn – few changes, but some experiments with alternate browsing (mobile)
- Maps – interface updates, add back in some functions from Atlas 1.0
